

COOPERATIVE ECONOMIC INSECT SURVEY REPORT
Glenn A. Salsbury, Survey Entomologist

Report 8, Volume 57
July 8, 2009

BORERS: The following borers are now active: Redheaded ash borer, twolined chestnut borer, and flatheaded locust borer.

FALL WEBWORM: Webbing is now evident on trees.

EGGPLANT FLEA BEETLE: Continue to cause problems on eggplant.

GRASSHOPPERS: Differential and two-striped have hatched.

BARK BEETLES: Numbers caught have dropped to near zero. Principle species still being caught are the granulate ambrosia beetle and the eastern fivespined ips.

EMERALD ASH BORER: None have been found in sample submitted to date.
